## Research Activities

- Performance Evaluation    📖 Usage of mathematical modeling (queuing networks, Petri nets and Markov chains), simulation, and experimental evaluation to investigate the performance of large-scale and high-performance computing systems, including Big Data applications and cloud computing systems.
- Cloud Computing    📖 Profiling and modeling of virtual resources for predicting and optimizing the performance of burstable instances and serverless computing in public cloud (AWS). The proposed models account for bursty workloads and allow meeting SLOs defined on the latency distribution.
- Uncertainty Propagation    📖 Analysis of dependability and performance models to investigate how uncertainty on input parameters propagates through a model and affects its output measures.
