Research Activities

- | | |
|--|---|
| Performance and Dependability Analysis | ■ Performance and dependability analysis of large-scale and complex systems using data analysis, stochastic formalisms (queuing networks, Petri nets, and Markov chains), simulation (discrete-event and agent-based), machine learning, and experimental evaluation. |
| Cloud Computing | ■ Profiling and modeling of virtual resources and microservice design patterns for performance prediction and optimization. These models consider bursty workloads and allow meeting objectives defined on the latency distribution. |
| Cyber-physical Systems | ■ Analysis of architectural patterns and coordination mechanisms to optimize the performance of systems whose space is dynamic and agents exhibit malicious behaviors. |
| Uncertainty Propagation | ■ Analysis of stochastic models to investigate how the uncertainty on input parameters propagates through a model and affects output measures. |
